Problem

- Most on-campus college students don't have cars
- To get from campus to an event and back . . .
  - Public transportation takes too long
  - Uber/Lyft is expensive, possibly dangerous
- Finding rides on FB event pages is difficult
  - Posts are cluttered, repetitive, and time consuming
- Need for a better carpool solution

and I tend to use Uber and Lyft a lot but it tends to add up

Solution: Hop'N

- A web service that allows students to easily find others that are going to the same event and setup carpools
    - Users can create profiles (Name, Phone, Email, Venmo)
    - Users can create event pages
    - Users can volunteer to drive and say how many seats they have
    - Users can assign themselves to a seat in the car
    - Contact info is shared between the driver and passengers
    - Payment is negotiable and info is shared
